

## A B S T R A C T

A Plasma or serum separation membrane that enables  
omitting centrifugal separation, is free from hemolysis  
5 attributed to destruction of red blood cells and realizes  
easy and rapid separation of plasma or serum from blood; and  
a filter apparatus including the plasma or serum separation  
membrane. In particular, a plasma or serum separation  
membrane being a membrane for separation of plasma or serum  
10 from blood and having a void ratio of 30% or below; and a  
filter apparatus comprising a filter member capable of  
attaining movement of plasma swifter than movement of blood  
cells and a plasma or serum separation membrane connected in  
series with a rear side of the filter member.
